

recommending that wireless transmitters should be sited away from school and health institutions. A report of the Council of Europe (Doc. 12608; May 6, 2011) recommended adopting the precautionary principle and the ALARA (as low as reasonably achievable) principle for both thermal and athermal effects of wireless radiation. The 2012 Bioinitiative Report concluded that wireless radiation at currently allowed exposure levels adversely affects human health. The Bioinitiative Report was based on over 1800 new studies and prepared by 29 authors from 10 countries, holding 10 medical degrees (M.D.s), 21 PhDs, and three MsC, MA or MPHs. Among the authors are three former presidents of the Bioelectromagnetics Society and five full members of BEMs. I very much recommend your reading the full 2012 Bioinitiative Report. See <http://www.bioinitiative.org>. Thank you for your consideration.
